GAME DESIGN

01. GAME DESIGN

Genre : Casual / Action / Beat'em ups

Platform : Android

Specificity : Fight against large waves of enemies then evolve.

*"Vous êtes un virus traversant les âges.
Défendez-vous face aux innombrables
vagues d'ennemis souhaitant vous
éradiquer."*

"Survivez, combattez, évoluez."

01. GAME DESIGN

Survive all waves of enemies

The player will use the weapons and skills at his disposal to pass several waves of enemies and pass the level. There are many levels, as soon as he passes one he can access the next.

Secondary loop :

Upgrade his skills in game temporarily and in the main menu definitively

UPGRADE

01. GAME DESIGN

Goal : Survive and pass the waves of enemies to complete the levels.

A level is composed of approximately 5 waves of enemies.

If the player dies, he has to start again at the beginning of the level or have the possibility to restart the wave.

During the levels, the player can collect currency from the enemies to trade them with skills. They are obtained temporarily and disappear once the level is finished.

01. GAME DESIGN

Fights

Player : The player can move in all directions and attacks the enemies automatically.

Stats : Life, Attack, Attack speed, Attack range, Move speed ...

Enemies: The enemies move towards the player and attack him, lowering his life bar.

OLD

01. GAME DESIGN

Progression :

Temporary : During levels, enemies have a percentage chance to loot items. These items can be upgraded during a dedicated time lapse between each wave, through experience flasks dropped by the enemies.

Permanent : Classic basic characteristics (life, attack, defense, drop rate, etc. ...). The player obtains these elements via rewards at the end of levels, store, loot box etc... Moreover, the player can improve his character in any way he wants through an evolution tree.

OLD

01. GAME DESIGN

NEW

01. GAME DESIGN

Progression :

ONLY ONE CURRENCY : During levels, enemies loot money. These money can be used during a dedicated time lapse between each wave.

Several characteristics can be improved thanks to the currency such as
life points, attack damage, move speed etc...

01. GAME DESIGN

Camera

- 3rd person in 2D view
- Portrait mode
- Fixed camera on the character

Character

A virus that evolves over time.

- Movements
- Skills/Attacks
- Currency and upgrades

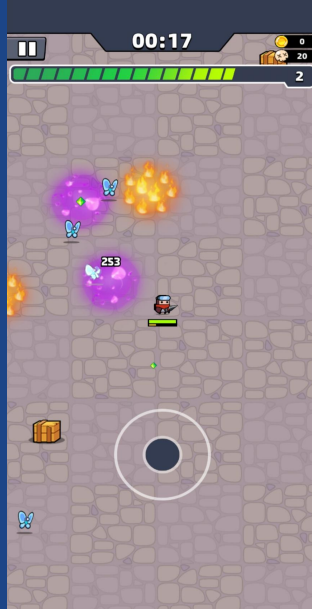

Controller

Touch buttons on the screen of the phone. Move with a joystick.

01. GAME DESIGN

Survivor.io

Plague Inc.

Z Defense

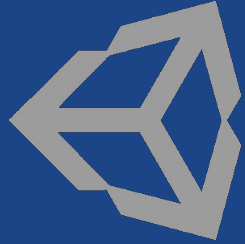

02

REALISATION

02. REALISATION

Cost : 3 \$

Game Engine : Unity

Mesh asset : Asset Store, Itch.io

02. REALISATION

Progression :

Type of enemies :

DPS

RANGED

TANK

DPS : High Speed and attack speed but low life points

RANGED : Launch projectile but low life points and move speed

TANK : High attack damage and life points but low move speed

02. REALISATION

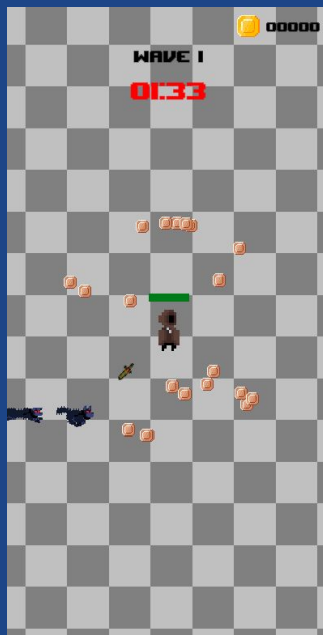

Main Loop

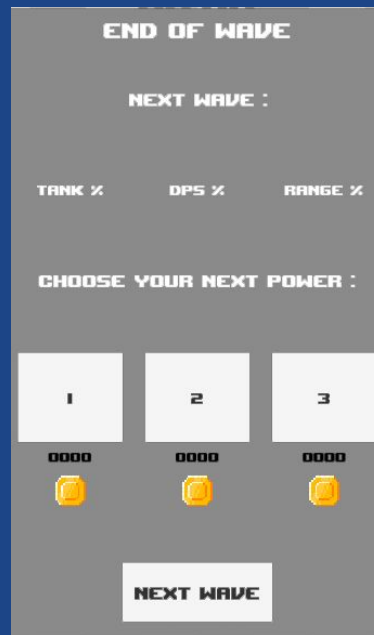

Victory and Defeat

During waves

Between waves

03

DEMONSTRATION

04

CHALLENGES

04. CHALLENGES

Differences between Unity Editor and a real Smartphone : Some elements are not the same when we tested on a smartphone, different screen sizes (ex : Joystick)

Lack of time / A project too ambitious: The idea we wanted to explore and the game design associated were too demanding compared to what we had

05

SYNTHESIS
